

## Boiler Cascade Module - DIN rail mounting

### Main Features

Controls 1 or 2 Boilers or one single Low/High fired Boiler in conjunction with a Boiler Controller

Optional Lockout monitoring or Stage Disable facility

Up to 10 boilers (or 5 Low/High boilers) in one Sequence

### User Features

LEDs show status of controller and Boiler Lockouts (if fitted)

### Engineering Features

Works with SeaChange Boiler Controller to provide Sequence Control of Multiple Boilers (up to 10 stages in one sequence)

Optional inputs for Lockout Signals or Manual Stage Disable Switches automatically remove that Stage from the Sequence

Local Manual Override of Outputs

DIN rail mounting, suitable for panel mounting

### Use of Lockout / Disable inputs

The Cascade module has two inputs which may be used to remove a boiler stage from the sequence in the case of a fault (eg. burner lockout signal) or because the stage is temporarily out of service (from a maintenance disable switch).

Alternatively, these inputs can be used to generate alarm signals which are transmitted to a SeaChange Doorway Supervisor (locally connected to the system, or remotely connected via a Autodialling Modem).

The alarm inputs may be used to maintain boiler lockout conditions, in which case they will disable the output relay for that stage until the fault is rectified. Alternatively they may be used as General Alarm inputs (for some other general plant fault) in which case the alarm is transmitted without affecting boiler sequencing.

# Features

## Fault Indicator

indicates whether Boiler stages are healthy or locked out / disabled.  
Green = both stages healthy  
Amber Flashing = one or more stages locked out

## Status lamp

indicates a Boiler stage demand if lit, also indicates that controller is in override mode if flashing.

## Select

is used during commissioning to allow a Zone Controller to display the Engineering Parameters of this controller.

## Terminals

are all of two-part construction to facilitate wiring connections.

## Connections

for Network.

## Connections

for Boiler enable signals; "spare" relay output may be used to drive a panel lamp indicating Boiler stage lockout or disabled.

## Latches

for retaining controller to DIN rail may be released using a screwdriver.

## Relay Status Lamps

indicate the current status of the two output channels.

## Override

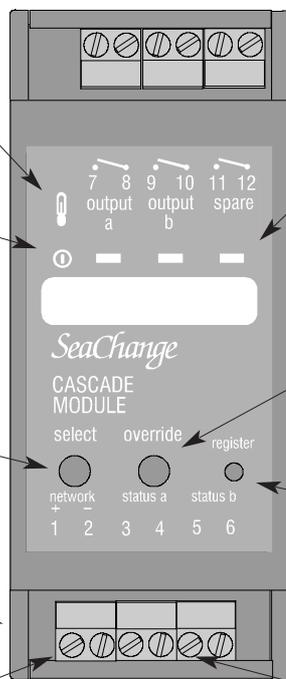

*Override* is used to enable boilers a and b temporarily, for testing purposes. After a short time, the boilers will return to automatic control. Boilers may be brought on for longer periods, under temperature control, by using the override feature of the Boiler Controller.

## Registration Button

is used during the commissioning process to build logical links between this module and the Boiler Controller.

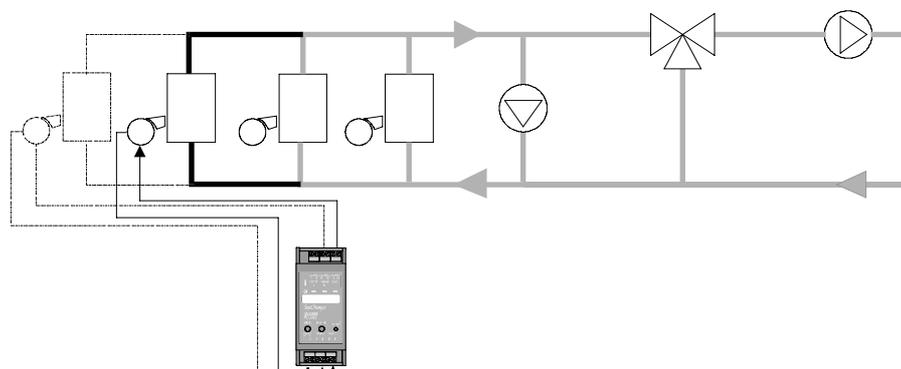

## Connections

for optional lockout signals or maintenance switches.

# Typical Applications

Up to 10 Boiler stages may be controlled in one sequence by the Boiler Controller

Lockout signals are optional. Inputs may alternatively be wired to Maintenance switches which will take Boiler Stages out of the operating sequence

First pair of Boiler stages and pumps / valves controlled by the Boiler Controller (see Boiler Controller Data Sheet for details).

## Configuration Parameters

Label	Doorway Code	Description	Units	Default Value	Range
ALRM	C1	Alarm Mode	-	1	0 - 3
		0: No Alarms			
		1: No Alarms			
		2: Inputs disable boilers			
		3: Boiler Lockout			
		When locked out boiler output stays on			
ALST	C2	Alarm State	-	1	0 - 1
		0: Open circuit			
		1: Short circuit			

## Monitoring Parameters

Label	Doorway Code	Description	Units	Default Value	Range
INPA	I1 (C30)	Status of input A	-	-	On/Off
INPB	I2 (C31)	Status of input B	-	-	On/Off
ENA	I3 (C32)	for future use	-	-	On/Off
ENB	I4 (C33)	for future use	-	-	On/Off
RLYA	O16 (C35)	Status of output A	-	-	On/Off
RLYB	O17 (C36)	Status of output B	-	-	On/Off
RLYC	O18 (C37)	Status of output C	-	-	On/Off
AUTO	W1 (C38)	Automatic, control mode	-	-	On/Off
OVRD	W2 (C39)	Override	-	-	On/Off
NOAL	C90	No Alarms on unit	-	-	On/Off
GENA	C91	General Alarm A	-	-	On/Off
GENB	C92	General Alarm B	-	-	On/Off
LOKA	C93	Boiler A Lockout	-	-	On/Off
LOKB	C94	Boiler B Lockout	-	-	On/Off

### Accessing Configuration and Monitoring Parameters

Configuration Parameters are used to adjust settings from their factory defaults; Monitoring Parameters are used to monitor internal readings (such as temperature readings) during the Commissioning process.

The Parameters may be viewed, and in the case of Configuration Parameters, adjusted by one of two methods; either by using a Zone Controller connected to the network, or by using the SeaChange Doorway Supervisor.

#### Using the Zone Controller:

- a) The Zone Controller must be connected to the network and *registered* (see Commissioning Guide for further details).
- b) Put the Zone Controller into Configuration Mode by depressing Select and Override buttons for 10 seconds, until the CNFG legend appears on the display.
- c) Press Select button on the target device (in this case, the Cascade Module).

- d) Hold down Select button on the Zone Controller, and rotate the rotary knob:

clockwise to view Monitoring Parameters  
anticlock to view Configuration Parameters

- e) When desired Configuration Parameter appears, release Select, hold down Override and turn knob to adjust the parameter (Monitoring Parameters cannot be adjusted).

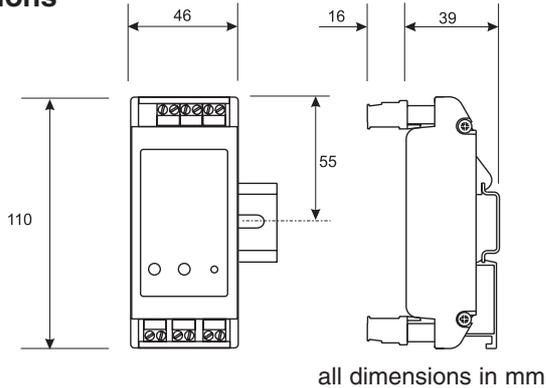

#### Using SeaChange Doorway:

Data Points may be added to a Doorway page to access/adjust any Configuration or Monitoring Parameter. Graphs of certain Parameters are also available. The code used to access each parameter is shown in the adjacent tables.

Further details of how to set up Doorway pages may be found in the SeaChange Doorway Manual, or in the online help facility supplied with SeaChange Doorway. The PC running SeaChange Doorway can be connected locally via a Serial Adaptor Module, or remotely using standard High-Speed Modems; all Parameters can thus be monitored and adjusted remotely.

# Specification

## Dimensions

## Electrical

Inputs 2 volt-free contacts.  
 Outputs 3 Triacs - 1A at 230V  
 Consumption 25mA from network

## Physical

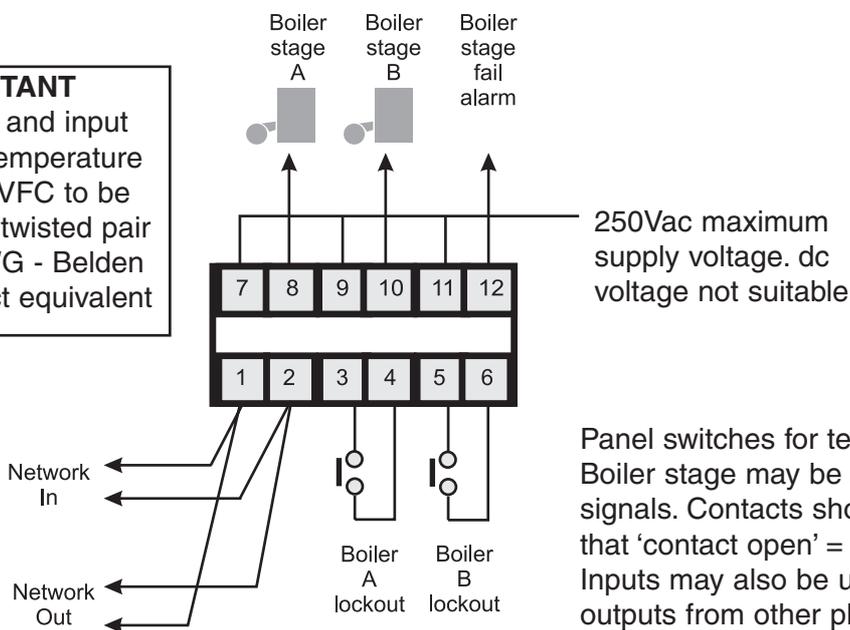

Weight 0.15 kg  
 Cover Material PC/ABS alloy Self extinguishing to UL 94 V0/1.60  
 Base Material Polyamide 6.6 Self extinguishing to UL 94 VO  
 Colour Dark Grey to Pantone 425

Conformant product

## Wiring Information

### IMPORTANT

All network and input cable from temperature sensors or VFC to be unscreened, twisted pair cable, 20AWG - Belden 8205 or direct equivalent
